PATENT

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

Claims 1-6 (canceled)

Claim 7 (currently amended): A method of controlling parasitic mites of honey bees, which comprises exposing parasitic mites to a miticidally effective amount of 2-heptanone, wherein said miticidal amount is effective to kill mites, to incapacitate mites such as by disrupting neural or other physiological functions to ~~prevent~~ inhibit essential mite functions or reproduction, or to render mites impaired sufficiently to be trapped, drowned, isolated, or otherwise removed from an area.

Claim 8 (original): A method of controlling parasitic mites of honey bees, which comprises placing in an area where mites are to be attracted a dispenser means which provides an amount of 2-heptanone effective to attract parasitic mites.

Claim 9 (original): The method of claim 8 wherein said parasitic mites are Varroa mites.

Claim 10 (original): The method of claim 8 wherein said dispensing means comprises a device or formulation which provides controlled release, slow release or sustained release of 2-heptanone.

Claim 11 (original): A method of controlling hive invading pests of honey bees, which comprises placing in an area where pests are to be controlled a dispenser means which provides an effective hive invader-controlling amount of 2-heptanone.

Claim 12 (original): The method of claim 11 wherein said dispensing means comprises a device or formulation which provides controlled release, slow release or sustained release of 2-heptanone.

Appl. No. 10/087,161  
Amendment dated May 10, 2004

PATENT

Claim 13 (original): The method of claim 11 wherein said hive invading pest is selected from the group consisting of greater wax moth, lesser wax moth, small hive beetle, ants, and *Tropilaelaps*.

Claim 14 (original): The method of claim 11 wherein said hive invading pest is the greater wax moth, *Galleria mellonella*.

Claims 15-26 (canceled)

Claim 27 (previously presented): The method of claim 7 wherein said parasitic mites are *Varroa* mites.

Claim 28 (previously presented): The method of claim 7 wherein said controlling is carried out by placing said effective amount of 2-heptanone inside a honey bee hive so that vapors of said compound are distributed in the hive.

Claim 29 (previously presented): The method of claim 7 wherein said effective amount of 2-heptanone is dispensed by a dispensing means comprising a device or formulation which provides controlled release, slow release or sustained release of said compound.

Claim 30 (previously presented): The method of claim 7 wherein said parasitic mites are exposed to an effective amount of 2-heptanone for one or more brood cycles.

Claim 31 (previously presented): The method of claim 7 wherein said parasitic mites are exposed to an effective amount of 2-heptanone for two or more brood cycles.
